

**IN THE CLAIMS:**

**Please enter the following amended claims:**

1. (Previously Amended) A process of transmitting a telephone number of a desired subscriber from a directory enquiry facility to a terminal connected to the directory enquiry facility over a telecommunication network with a first channel for voice transmission and a second channel for data transmission, said process comprising:

transmitting an enquiry with the data describing the desired subscriber from the terminal to the directory enquiry facility on the first channel;

transmitting the telephone number in the form of a numeric string from the directory enquiry facility to the terminal on the second channel (DCHAN);

receiving the numeric string at the terminal;

determining the telephone number from the numeric string; and

storing the telephone number in a memory in the terminal provided for direct dialing of telephone numbers.

2. (Previously Amended) A process according to claim 1, whereby the directory enquiry facility also issues an action command that causes the terminal to determine the telephone number from the numeric string and to save the telephone number in the memory in the terminal provided for direct dialing of telephone numbers.

3. (Previously Amended) A process according to claim 1, whereby the telephone number is displayed on a display in the terminal.

4. (Original) A process according to claim 1 where the telecommunication network is an ISDN network and the second channel is a D channel of the ISDN network.

B1  
5. (Original) A process according to claim 1 where the telecommunication network is a GSM mobile telephone network and the second channel is an organization channel of the mobile telephone network.

6. (Original) A process according to claim 1 whereby the directory enquiry facility sends the data describing the desired subscriber as an alpha-numeric string to the terminal on the second channel, and the terminal receives the alpha-numeric string, derives the data from the alpha-numeric string, and displays it on a display.

7. (Original) A process according to claim 1 wherein said terminal includes a keyboard, and the terminal sends a message to the directory enquiry facility on the second channel when a key is pressed on the keyboard of the terminal, indicating to the directory enquiry facility a request for further information.

8. (Currently Amended) A directory enquiry facility comprising:

receiver means for connectable ing to a terminal over a telecommunication network on a line with a first channel for voice transmission and a second channel for data transmission, and receiving on the first channel an enquiry with data describing a desired subscriber; ~~said facility including a~~

converter means for converting a telephone number into a numeric string; and

transmitter means for transmitting the numeric string to the terminal on the second channel.

B1  
9. (Currently Amended) A directory enquiry facility according to claim 86, wherein the facility further comprises means for is equipped to issueing an action command which causes the terminal to determine the telephone number from the numeric string and store that telephone number in a memory of the terminal provided for direct dialing of the telephone number.

10. (Currently Amended) A terminal for a telecommunication network, the terminal comprising:

~~that is~~ means for connectable means for connecting over the telecommunication network to a directory enquiry facility on a line with a first channel for voice transmission and a second channel for data transmission;

means for transmitting on the first channel for voice transmission an enquiry with data describing a desired subscriber;

means for whereby the terminal is capable of receiving on the second channel a telephone number of a subscriber sent from the directory enquiry facility in the form of a numeric string; ~~and is~~

means for capable of determining the telephone number from the numeric string; and has  
a

memory means for storing in which the telephone number can be stored and from which  
~~the terminal can~~ for yielding extract the telephone number for direct dialing of the subscriber.

B1  
11. (Previously Added) A directory enquiry telephone number transmission system, comprising:

means for transmitting an enquiry with data describing a desired subscriber from a terminal to a directory enquiry facility on a first channel for voice transmission;

means for transmitting a telephone number in the form of a numeric string from the directory enquiry facility to the terminal on a second channel for data transmission;

means for receiving the numeric string at the terminal;

means for issuing an action command by the directory enquiry facility to cause the terminal to determine the telephone number from the numeric string and to save the telephone number in the memory in the terminal provided for direct dialing of telephone numbers.

12. (New) A directory enquiry facility comprising:

**PRELIMINARY AMENDMENT**

U.S. Application No. 09/199,320

**Q51986**

a receiving module configured to receive from a terminal connected to a telecommunication network with a line with a first channel for voice transmission and a second channel for data transmission an enquiry with data describing a desired subscriber, the receiving module receiving the enquiry on the first channel;

a converter configured to convert a telephone number into a numeric string; and

B1 a transmitter configured to transmit the numeric string to the terminal on the second channel.

13. (New) The directory enquiry facility of claim 12, wherein the facility is configured to issue an action command to cause the terminal to determine the telephone number from the numeric string and to store the telephone number in a memory of the terminal provided for direct dialing of the telephone number;

14. (New) A terminal in a telecommunication network comprising:

a connecting module configured to connect over the telecommunication network to a directory enquiry facility on a line with a first channel for voice transmission and a second channel for data transmission, and to transmit on the first channel an enquiry with data describing a desired subscriber;

a receiving module configured to receive on the second channel a telephone number of a subscriber sent from the directory enquiry facility in the form of a numeric string and to determine the telephone number from the numeric string; and

**PRELIMINARY AMENDMENT**  
U.S. Application No. 09/199,320

**Q51986**

31 a memory configured to store the telephone number and to yield the telephone number  
for direct dialing of the subscriber.
